## CLAIMS

- A pressure sensitive adhesive composition which comprises the following components (A), (B) and
  (C):
  - (A) A hydrolyzable silyl group-containing organic polymer containing at least 1.3 hydrolyzable silyl groups per molecule and having a number average molecular weight of 15,000 to 100,000;
- 10 (B) A hydrolyzable silyl group-containing organic polymer containing 0.3 to 1.3 hydrolyzable silyl groups per molecule and having a number average molecular weight of 500 to 15,000, the main chain of which polymer being substantially composed of a repeating unit or units represented by the general formula 15 -R<sup>1</sup>-O- (R<sup>1</sup> being a divalent alkylene group);
  - (C) A tackifier resin.
  - 2. The pressure sensitive adhesive composition according to Claim 1
- wherein the main chain of the organic polymer (A) is substantially composed of a repeating unit or units represented by the general formula  $-R^1-O-$  ( $R^1$  being a divalent alkylene group).
- 25 3. The pressure sensitive adhesive composition according to Claim 1 or 2

wherein the main chain of the hydrolyzable silyl group-containing organic polymers (A) and (B) is substantially polyoxypropylene.

4. The pressure sensitive adhesive composition according to any one of Claims 1 to 3

wherein the hydrolyzable silyl group of the hydrolyzable silyl group-containing organic polymers (A) and (B) is represented by the following general formula (I):

30

35

 $-SiX_aR^2_{3-a}$  (I)

(wherein,  $R^2$  represents a substituted or unsubstituted monovalent organic group containing 1 to 20 carbon atoms, X represents a hydrolyzable group, and a represents 1, 2 or 3.)
